NaturalLED Announces First UL924 Certification for Emergency LED Tube

Ontario, CA, December 29, 2023 – naturalLED® (www.naturalled.com), a leading provider of innovative lighting solutions, is proud to announce that its Emergency Backup LED Tube has become the first product of its kind to receive UL 924 certification. This certification is a testament to NaturalLED's commitment to delivering high-quality, reliable lighting solutions that meet the most stringent safety standards.

UL 924 certification is a globally recognized standard for emergency lighting and power equipment. It ensures that products meet the highest performance and safety requirements, providing peace of mind to customers in emergency situations. By achieving this certification, NaturalLED's Emergency Backup LED Tube has proven its ability to provide reliable illumination during power outages, ensuring the safety and security of occupants in various settings.

The Emergency Backup LED Tube is hardwired to the incoming line voltage and contains a built-in driver and battery and replaces the need for an external battery backup system. It's designed to act as a standard LED T8 tube with battery backup capabilities that seamlessly integrates into existing linear 4-foot lighting fixtures, making it an ideal solution for retrofitting applications. With its advanced technology, it provides instant-on lighting during power interruptions, eliminating any potential downtime or disruption. This innovative product not only enhances safety but also offers significant energy savings, thanks to its high efficiency and long lifespan.

"We are thrilled to be the first to receive UL 924 certification for our Emergency Backup LED Tube," said Koji Sasaki, President of NaturalLED. "This achievement underscores our commitment to delivering cutting-edge lighting solutions that prioritize safety and reliability. With this certification, our customers can trust that our Emergency Backup LED Tube will perform flawlessly during critical situations."

NaturalLED's Emergency Backup LED Tube is suitable for a wide range of applications, including commercial buildings, educational institutions, healthcare facilities, and industrial settings. Its versatile design and easy installation make it an ideal choice for both new construction projects and retrofitting existing systems.
